

DEVICE AND METHOD FOR PROCESSING A STREAM OF DATA

ABSTRACT OF THE DISCLOSURE

This invention relates to a device and method for producing a stream of data. The device receives a stream of data as an input and includes means for identifying a portion of the input stream and outputting the identified portion. The device also includes means for selecting a further portion of the input stream and outputting the selected portion. The relative timing between the two output streams is monitored and maintained with respect to the input stream.
